Project Tittle: Phone Planet Management System

Project Description and Features:

The mobile shop management system is a software application that helps manage the daily operations of a mobile shop. It includes features such as managing mobiles, bills, payments, customers, sales, stock. It also provides functions for viewing mobiles & comparing them and making payments. It is designed to be used by only two actors- admin and Customer.

User Stories:

Use Case Name	Actor	User Story
Sign Up	Admin & Customer	As an admin or a customer in both cases, I need to sign up in the system. So that I can be an authorized member of this system
Log in & Log out	Admin & Customer	As an Admin and Customer, I want to be able to login and logout of the system securely, so that I can access my account and use the system's features
Managing Products	Admin	As an Admin of this system, I need to have access to manage products. Such as adding new products, deleting existing products, editing the product information. So that, I can track all products for improvement of this system.
Searching	Admin & Customer	As an admin and a customer, I need to search the products for work efficiency & save our valuable time.
Managing Stocks	Admin	As an admin, I need to keep track of my mobiles stocks, for giving the customers a hustle free system.
Customer History	Admin	As an admin, I need my customer history to keep track of customer's interests. Also, it needed for future record that will prove that a particular customer takes some products from our store.
Sell History	Admin	As an admin, I need my store's sells history to keep track of customers' demand. According to demand, I will manage my products. It will ensure my store business continuity.
Browse Products	Customer	As a customer, I have to see the available mobile for sale. So that, I can choose my desired mobile phone.
Buy Products	Customer	As a customer, I need that scope to buy products. I can buy as many products as I want. The system needs to support that process
Adding to Cart	Customer	As a customer, if I want, I can add into cart as many phones as I want. In the time of buying, I can buy them all or can buy my chosen specific models or even I can refuse to buy any products that time.
Make Payment	Customer	As a Customer, I need to have privileged in making payment in both ways. Online banking and Cash on delivery.
Payment Receipt	Customer	As a customer, at the end of making payment I can print my payment receipt if I want for future preservation. In that receipt, my details, transaction details and payment details should be available.
Discount	Customer	As a customer, I could get 20% discount on next payment if I bought 3 mobile phones earlier.

Compare	Customer	As a customer, I can compare 2 mobile phones based on some specification so that I can take decision about my purchase.
Approval	Admin	As an Admin I can approve or reject any customer. Once I approved any customer, He/she can log in to the system.
